5. (i) Segment of a word-processed document is shown below with some formatting done. These formatting tasks are labelled as ①–⑤. Before formatting, all the text in the original document had the same font size.

Following are the icons of some formatting tools in a word processing software:

Icon of the formatting tool								
Icon label	℗	⑬	ℝ	⑤	ⓣ	⑪	⑫	⑳

Identify the icons of formatting tools, indicated by the labels ℗–⑳ which are required to do the formatting tasks indicated by the labels ①–⑤. Write down the label of each formatting task ①–⑤ and its matching icon label of the formatting tool in the **task label ⟶ icon label** format.

(ii) The following spreadsheet segment shows some statistics of road accidents reported for 2018.

(a) Write down the correct formula in the form of =function(cell1:cell2) that should be entered in cell B13 to find the total number of vehicles involved in fatal accidents.

(b) Assume that the formula entered into the cell B13 is copied to cell range C13:E13. Write down the formula displayed in the cell D13.

(c) Write down the formula in the form of =function(cell3:cell4) that should be entered in cell D14 to get the lowest value recorded for critical accidents.

(d) Write down the appropriate cell range in the form of (cell5:cell6) for the formula written in cell B15 to identify the highest number of any accident.

(e) Write down the most suitable chart type available in spreadsheet software from the given list of charts for the following:

(1) To show comparisons of the types of accidents involving each vehicle type in the same graph.

List of charts for part (1): {Area, Bar, Pie, Scatter}

(2) To show the number of fatal accidents for each vehicle type.

List of charts for part (2): {Area, Line, Pie, Scatter}

6. (i) Aruni is an O/L student. In addition to her studies, she writes essays that she submits to various newspapers. She has stored a considerable number of mp3 files in her computer. In addition, many digital pictures that she has taken are also stored on her computer. Her parents have also asked her to store all the online payment receipts on her computer as well.

Aruni stores **all** the files related to the above, in **one** single folder (directory) on her computer.

(a) Write down a problem that Aruni might face when searching a particular file in the existing storage scheme.

(b) Following folder structure is suggested for Aruni. Match the folder labels against the folder names given in the list, in the **folder label → name** format.

List of folder names : {Receipts, Music, Pictures, Studies}

(c) Write **one** practice Aruni can follow to avoid her hard disk becoming full.

(d) Write **one** practice that Aruni could have followed to avoid losing data in the event of a computer failure.

(ii) A hospital is planning to introduce a new computerized system to overcome the issues in the existing patient management system. A team was assigned to do the development of the above system.

(a) The team decides to develop the system in small portions allowing the hospital management to provide regular feedback. What is the most suitable system development life cycle model that the team should use?

(b) The hospital management conducts a testing session to decide whether the newly developed system can be approved or not. What is the test that the hospital management should perform?

(c) The hospital management wanted to terminate the existing system immediately and replace it with the newly developed one. What is the deployment method wanted by the hospital management?

(d) The development team suggested introducing the new system initially to the Kandy branch of the hospital before deploying it to all other branches. What is the deployment method suggested by the development team?

(iii) A school library is planning to introduce a computerized library management system to replace the existing manual system. List **two** techniques that could be used for requirement identification.
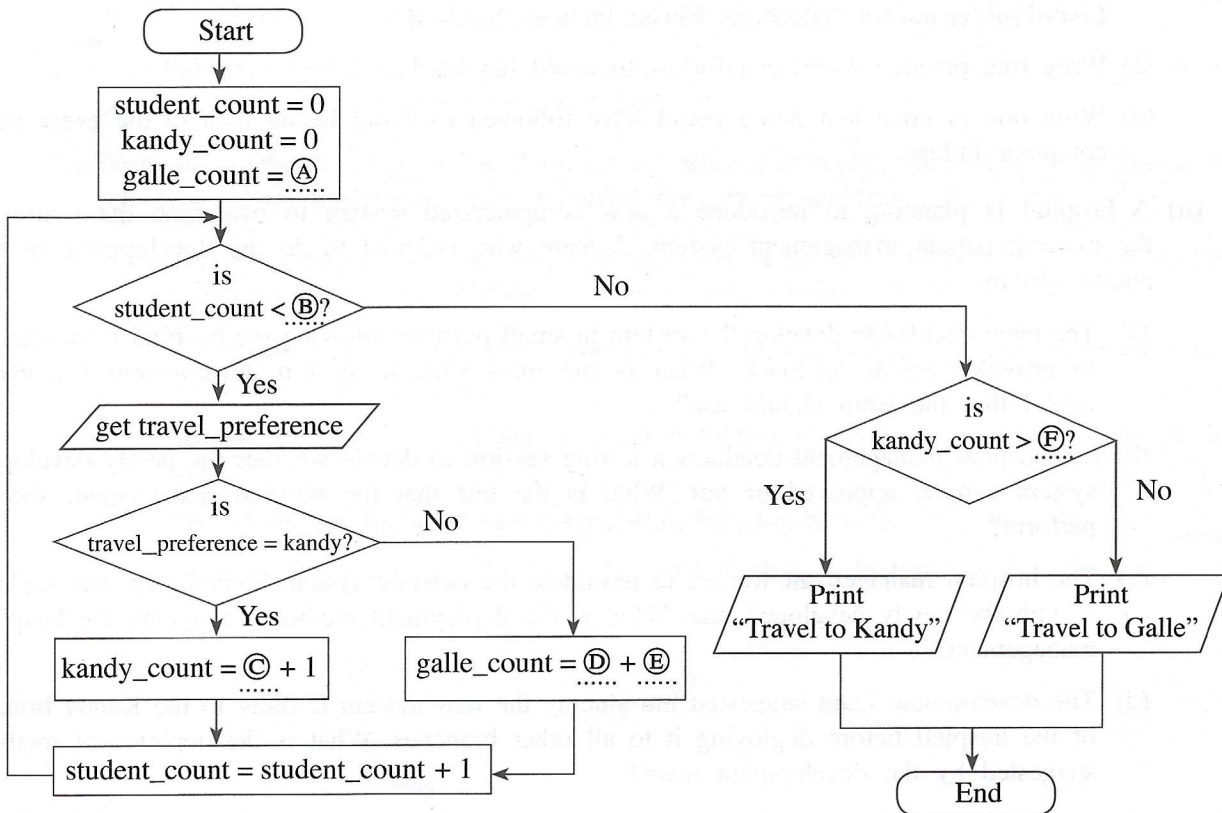

7. (i) Answer parts (a) and (b) based on the following pseudocode:

```
BEGIN
   counter = 0,  x = 0
      WHILE  counter<20
        DISPLAY "Enter a Number"
        READ num
        x = x + num
        counter = counter + 1
      ENDWHILE
   DISPLAY x
END
```

(a) What is the exact purpose of the above pseudocode?

(b) What would happen if the statement "counter = counter + 1" is removed from the pseudocode?

(ii) A teacher asked from 50 students to choose their preferred travel destination (either Kandy or Galle) for the annual school trip. The destination will be decided based on the highest student preference. The following flowchart with blanks labelled from Ⓐ to Ⓕ represents this scenario.

Write down the appropriate answers to match the labels Ⓐ to Ⓕ in the **label → answer** format.
